POTENTIAL HEALTH EFFECTS	See below and Section 11 for additional information						
Likely Routes of Exposure	See below	See below					
EYE	May cause	irritation (tear formation and red	ness) if dust gets in eyes.				
SKIN	Not absorb	Not absorbed by the skin, but may cause dryness if prolonged exposure.					
INGESTION	Ingestion of small to moderate quantities is not considered harmful, but may cause irritation of the mouth, throat and stomach.						
INHALATION	Acute inhalation can cause dryness of the nasal passage and lung congestion, coughing and general throat irritation. Chronic inhalation of dust should be avoided.						
CHRONIC EFFECTS	Chronic inhalation of crystalline silica dust in excess of the Threshold Limit Value (TLV) recommended by the American Conference of Governmental Industrial Hygienists (ACGIH)(.025mg/m ³) or in excess of the Permissible Exposure Limit (PEL) established by OSHA (0.050mg/m ³), over a prolonged number of years may contribute to silicosis. Crystalline silica, when inhaled as respirable dust, has been classified in a 1997 monograph (Volume 68, "Silica") of the International Agency for Research on Cancer (IARC) as carcinogenic to humans over prolonged and sustained exposure.						
CONDITIONS AGGRAVATED BY EXPOSURE	Pre-existing diseases of the upper respiratory tract and lung such as bronchitis, emphysema, and asthma.

If dust concentration is greater than fifty (50) and less than two hundred (200) times the PEL use a power air-purifying (positive pressure) respirator with a replaceable N95 filter. If dust concentration is greater than two hundred (200) times the PEL use a type C, supplied air respirator (continuous flow, positive pressure), with full face piece, hood or helmet.					
GENERAL HYGIENE	Avoid bre	athing dust. Avoid	d contact with eye	s. Wash hands after handling and before eat	ting or drinking.	
For sampling silica dusts refer to NIOS	SH Analytic	al Method 7500 or	OSHA method ID	142
